

Class 9: Hay Judging Seniors Only

Rank these four alfalfa hays as they should be fed to first calf heifers during early lactation. It is the goal to meet heifer energy and protein requirements largely with forage. Additional energy supplementation with concentrates increase feed costs and decreases profitability of this cow/calf operation. The provided nutrient analysis is on a dry matter basis.

Hay	TDN, %	CP, %	NDF, %	ADF, %
1	53.2	14.7	48.1	36.2
2	50.2	13.4	52.4	37.3
3	54.4	16.3	47.2	35.3
4	59.3	19.1	45.5	34.6
